Submitted (15-APR-2002) Maize Mapping Project, University of Missouri, Columbia, MO 65211, USA

If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR, www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB:

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science: plant material and RNA prepared at Texas A & M University,
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.
Seq primer: Sug3-14 (TAGTCTAGCGGCGCGACC)

/dlone lib="wounded leaves"
/dlone lip library was prepared from polyA+ RNA
harvested from 8-day-old hydroponically grown, BTx623
harvested from 8-day-old hydroponically grown, BTx623
leaf ws crushed without damaging the midvein. For others,
methyl jasmonate was added to the growth medium to a final
concentration of 100 uM. Leaves were harvested 3 and 27 hr
after treatment and pooled. Double-stranded cDNA was
cloned unidirectionally into different brailI sites of the
pwhiles-FIJ vector (5-prime DrailI site is CACTGTGTG,
3-prime DrailI site is CACCATGTG). Xhol excises the CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                122

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
